Inside the future of Lead Incubator and Startup Accelerator (LISA) Cohort 11

Mali

Mali leverages artificial intelligence to drive the future of ethical investment. By prioritizing high-quality data, rigorous data sanitation, and advanced techniques such as fine-tuning and reinforced learning, Mali delivers an AI copilot designed to help users make responsible investment decisions.

Gutway

Gutway provides a service that uses artificial intelligence to offer customized nutrition solutions, especially for elderly individuals. By utilizing health information from various sources and considering personal needs and preferences, Gutway ensures that care is tailored and efficient for a wide range of people.

LEAD AI Launchpad

Ace2Race

ACE2Race aims to democratize elite sports coaching by leveraging a proprietary AI-powered Biometric Engine that transforms smartphones into advanced analysis tools, eliminating costly hardware. Initially targeting tennis, the platform standardizes player ratings using computer vision and delivers actionable drill plans to clubs, empowering staff and helping scale player development.

Zathia

Zathia uses AI to provide freelance creatives with personalized structure and guidance, addressing the lack of traditional business support in their field. Rather than making AI the centerpiece, Zathia seamlessly integrates it to simplify career navigation, reduce admin tasks, and offer tailored recommendations based on individual goals and skills. The platform focuses on reducing workflow friction by improving organization and surfacing timely, relevant resources, while prioritizing usability and trust to ensure that technology enhances the creative process without overwhelming users.

ExVolt

ExVolt's sustains its competitive edge within the industry by focusing on using AI to optimize operations for greater efficiency, enhancing customer experiences with personalized solutions and faster responses, and identifying new business opportunities through data analysis.
